

Roof Components

Ridges

The apex of a roof can be given either a sharp or soft outline by using different ridge profiles. The most commonly used is the half round ridge and a similar soft appearance is obtained with a hog back ridge. An angle ridge provides a sharp apex and this in turn can be broken up by using capped angle ridges or a special ornamental profile.

A baby half-round ridge (165mm diameter) can be supplied for use on porches or canopies. The end of

a ridge-line can be neatly finished with a stop end or hip end.

Hips

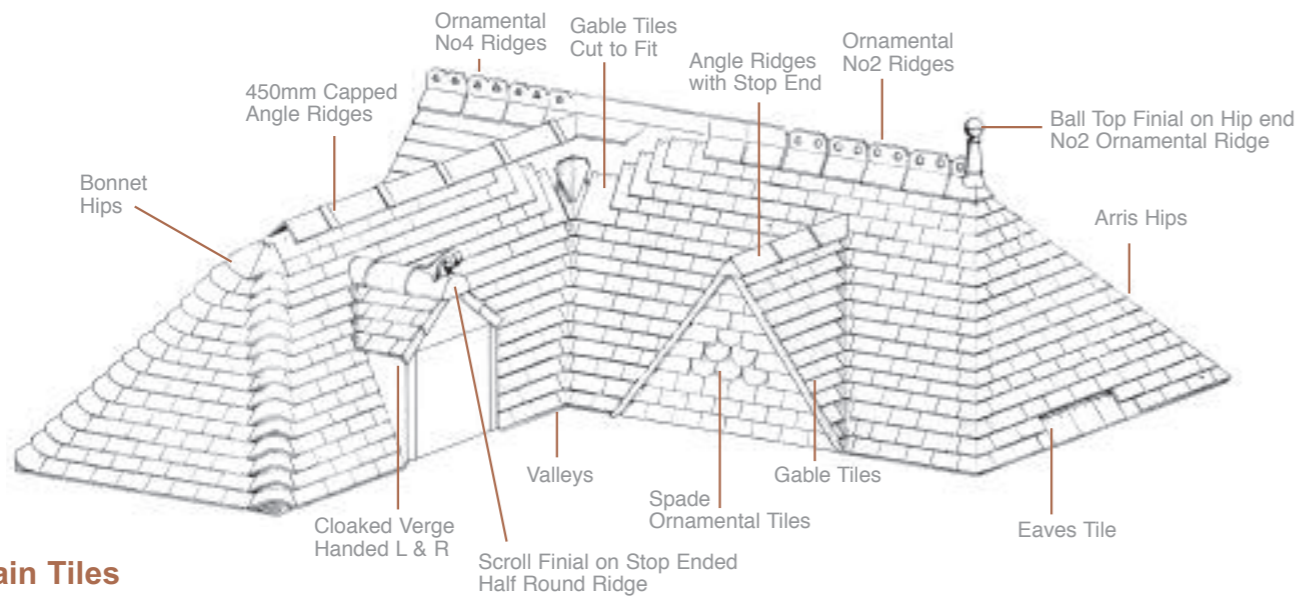

Arris Hips: The use of Arris Hips gives a sharp definition to the profile of the roof. Standard roof pitches are for 35, 40, 45 and 50°. Hips for other pitches can be made as specials.

Bonnet Hips: These provide a rounded and softer profile to a roof. They do not fit close to the hip tile beneath them and mortar bedding must be used to fill the space

between one hip tile and the one beneath. This bedding gives a pleasing effect if it is struck back about 15mm from the edge of the hip tile and the edge wiped clean.

Valleys

Valley Tiles: Valley tiles are made to course with plain tiles in standard pitches for 35, 40, 45 and 50° roofs and can be made as specials for other pitches. They are held in place by the two adjacent plain tiles both of which are twice nailed. This provides a sound and visually attractive form of valley covering.
